

Dr. Celia Kaye received her M.D. from Wayne State University College of Medicine in Detroit and her Ph.D. in biochemistry from Northwestern University in Chicago. She is currently Vice Dean of the School of Medicine and Professor of Pediatrics at The University of Texas Health Science Center at San Antonio. She holds leadership positions in numerous state and national pediatric and genetics organizations including the National Newborn Screening and Genetics Resource Center, the American College of Medical Genetics (Public Health Genetics Committee), the American Academy of Pediatrics Committee on Genetics, and the Texas Department of Health Newborn Screening Task Force. She is the author of numerous original articles on genetics and has held numerous federally funded grants to enhance availability of genetic services, particularly to underserved and ethnically diverse populations.
